

Project Profile

Aloft Hotel | Redmond, WA
Hospitality

Project Details

Over 230 Stonewood Architectural Panels accent the state of the art Aloft Hotel in Redmond, WA. The northwestern inspired building, designed by Ankrom Moisan, features textured tiles, exposed concrete, and patterned wall coverings that flawlessly complement the clean architectural lines of the Stonewood panelized façade. Architects opted for an inviting woodgrain design to reveal textures reminiscent of lush, deciduous forests.

The six-story Aloft Hotel will include five levels of wood framing over three levels of concrete structure, and is the first Aloft hotel in the Puget Sound region.
