

Panel Overview

Application	Exterior
Building Type	Medical
Design	Woodgrains and Neutral
Fasteners	Color Match Exposed Fasteners

Project Details

Over 4,500 sq. ft. of Stonewood Architectural panels were installed on Mercy Health Outpatient Center in Hudsonville, MI. The new building features an inviting Stonewood woodgrain with neutral undertones. With construction taking place over winter in Michigan, Stonewood was selected over multiple other cladding options as the best material to withstand the harsh elements. Stonewood's vast woodgrain selection allowed the architects to create a warm atmosphere—a welcomed contrast to typical medical and civic architectural details.

Once completed, the building will offer custom-designed Urgent Care check-in desks to support patient and staff privacy. The custom elements were designed to enrich the patient experience and support each visitor on their care journey.
